ROD ANATOMY MATCH

A fishing rod seems simple, but there are lots of parts we need to make it work, do you know what they are?

Draw a line from the description to the correct part of the rod on the left.

BAIT:

A natural attractant like worms or baitfish that tempts the fish into biting the hook.

BOBBER:

A ball attached to fishing line that floats. It keeps bait from sinking to the bottom and can help you see when a fish bites!

FLY:

A special kind of lure with strings and feathers used in river fishing.

LINE:

A special string made for fishing.

LURE:

An item designed to look like the fish's prey or other food it would like to eat.

REEL:

A device that holds, spools out, and retrieves the fishing line.

SINKER:

A weight that helps pull the line down in the water, closer to the ocean floor.
